PROFILE

AI Security Engineer and Cybersecurity & Digital Forensics graduate specialising in securing AI agents and agentic workflows, DFIR, and security operations. Builds and security-tests production tooling, from a SOC phishing-triage agent hardened against prompt injection to a 40-VM adversary range. Seeking AI security, security engineering, or SOC / DFIR roles.

CORE SKILLS

AI & AI Security: AI agent and agentic workflow engineering, Claude Skills, Model Context Protocol (MCP), prompt-injection resistance, adversarial input handling, AI-assisted triage and vulnerability discovery

Security Operations & DFIR: Incident response, endpoint forensics (Windows, Linux), IOC identification and triage, threat detection, static and dynamic malware analysis, Velociraptor, Autopsy, x64dbg

Offensive Security: Web application penetration testing, vulnerability assessment, CVSS, Burp Suite, OWASP ZAP, Nmap, Kali Linux

Cloud, Network & Development: AWS (Certified Cloud Practitioner), Palo Alto Networks NGFW, site-to-site VPN, firewall policy and access control, Python, C#, REST APIs, Git

EXPERIENCE

AI Security Engineer (Contract) — Tangent9 Jul 2026 – Sep 2026

- Built and shipped a production phishing-email analysis agent for blue-team SOC triage, with automated IOC extraction, a calibrated confidence model, and structured analyst output.
- Hardened agentic workflows against adversarial input through prompt-injection resistance, scope enforcement, and audit trails; adversarial testing caught an IOC domain-comparison flaw before release.
- Engineered the AssureIQ AI investigation suite for GRC automation, leading an extraction-first refactor that cut token consumption ~62x across a large document corpus while preserving forensic traceability.
- Built a shared core package and an automated build-gate validator blocking non-conforming releases; authored security architecture for a multi-tenant SaaS platform, including PostgreSQL row-level tenant isolation.

Junior DFIR Specialist — ST Engineering Info-Security Sep 2025 – Jan 2026

- Performed forensic casework and live incident response across Windows and Linux endpoints, triaging Indicators of Compromise (IOCs) on real cases.
- Designed and deployed a production 40-VM cyber range for strategic partners, covering network infrastructure architecture and multi-stage adversary threat simulation.
- Prototyped an agentic DFIR capability bridging the Velociraptor API with large language models via the Model Context Protocol (MCP), automating telemetry analysis to accelerate triage.

Sales Intern — Apollo Healthcare Resources Feb 2026 – Apr 2026

- Ran end-to-end sales cycles from sourcing and pricing negotiation to client fulfilment.

TECHNICAL PROJECT

Web Application Penetration Testing — Identified three high-severity vulnerabilities on the Trip.com domain under authorised scope, rated with CVSS (Burp Suite, OWASP ZAP, Nmap).

EDUCATION & CERTIFICATIONS

Diploma in Cybersecurity & Digital Forensics (AI for Cybersecurity) — Ngee Ann Polytechnic May 2026

GPA 3.94 | Director's List, three consecutive semesters (top 10% of cohort) | Eagles Award (top 15%)

BSc Information Security, National University of Singapore — offer accepted Commencing 2028

Certifications: AWS Certified Cloud Practitioner (Jun 2025) | DFIR Foundations & Techniques, Blue Cape Security (Jan 2026)

Awards: Group-IB Prize — Most Outstanding Performance, six-month internship cohort (May 2026)

Activities: BrainHack and Hack The Box (HTB) Capture the Flag competitions; Nullsec Cybersecurity Club
